

About

Savvy eBooks was founded in 2007 by John Scott after having personally spent a small fortune on eBooks and the latest digital products available.

When I first started on the internet in 1995, my websites were basically designed to be an "add-on" to my existing physical businesses, however, as time progressed I became more interested in making some of my websites standalone businesses. I started out buying the recommended eBooks available on a wide range of subjects, plus the latest releases and etc. only to find that many of the so-called latest releases were really just the same old information presented in a different format. Plus, it wasn't too long before I had run up a couple of thousand dollars in costs.

I subsequently discovered that many of these eBooks are available for FREE, however, finding them can take an inordinate amount of time and effort. So I decided to set up Savvy eBooks to collect as many of the FREE eBooks available all in one centralized repository. We are slowly adding more titles to our catalogue, and we will soon have well over one hundred titles on offer. All our eBooks are in Adobe PDF format for your safety and security (we consider .exe files to be inherently risky) and many eBooks come with RESELL Rights or Private Label Rights (PLR).
